Are We Making Jack a Dull Boy?

Males are...

“Boys think that academic disengagement is a sign of masculinity. The less you can do in school, the less connected you are, the less interested you are, the more manly you are.”

- Michael Kimmel, Sociologist, Gender Studies

“Gender differences begin as tiny seeds...(and) blossom only under the hot sun of our highly gendered society.”

- Lise Eliot, Ph.D.

“We found children at a very early age—from the most conservative to the most liberal societies—quickly internalize this myth that girls are vulnerable and boys are strong and independent.”

- Robert Blum, Oct 2017, Johns Hopkins University

“Girls and boys are as different from the neck up as they are from the neck down. ...I’ve come to believe that the brain is the most genderized part of the body.” (JoAnn Deak)

Physical

- Big, heavy, stable
- Active: expressive in unrestrained way
- Fine muscle development slow. Frustrating. Also related to speech.

Cerebellum

### Attachment
- Less eye contact; less connected in boys.
- Attachment behavior \( \Rightarrow \) Attachment state

“Disruptive and underachieving boys were insecurely attached; high achieving boys all had strong attachments.

“Securely attached boys need little in the way of "mother nurture” at school, whilst insecurely attached boys need considerably more attention than any teacher or school is likely to be able to provide.”

- M. Ashley, *Caring for the Boys*

### Social

- Temporal Parietal Junction processes social information. Poor facial expression recognition.

- Less estrogen and oxytocin, “chemicals of connection”
- Simon Baron-Cohen, “The Essential Difference”
- More dopamine, “the craving neurochemical”

- Impulse control.
- Poor self-talk impedes suppression of behavior.

- Simon Baron-Cohen

### Cognitive

- Develop later, less in boys.

- Anterior Cingulate Cortex: controls high-level functions, executive functioning. Less grey matter in boys.
- Boys’ rest state in quite inactive.

### Academic

- Transfers new information to long-term memory. Smaller volume in boys.

- Hearing, selective listening, comprehension, tone of voice. Smaller in boys

- Richard Whitmire, *Why Boys Fail*

- Anthony Rao, *The Way of Boys*
• More white matter (info transfer, spatial skills)
• Less grey matter (processing, verbal skills, multi-tasking)
• Smaller corpus callosum (cross-talk, multi-tasking)
• Smaller Anterior commissure (memory, emotion, speech and hearing)
• Larger amygdala (responds to fear and danger with adrenaline and cortisol)

**Emotional**
• Needier: longer to learn self-calming skills; startle, cry, and grimace more; more irritable, more easily distressed; harder to soothe
• More aggressive and territorial (testosterone & vasopressin)

**Moral**
• Morality of Justice is dominant: rules, laws, right & wrong

**Identity**
• "Gender expectations are socially constructed, ruthlessly enforced and powerful."

- Gilbert and Gilbert, Masculinity Goes to School

"For boys, fairness is less about equality and more about clarity."
- Abigail Norfleet James, *Teaching the Male Brain*

**Masculinity Tests**
1. Prove you are not feminine.
2. Prove you are strong.
3. Prove you can endure pain and hardship.

**Effect**
1. Hidden feelings
2. Hidden intelligence
3. Hidden compassion

"When did girl-behavior become the gold standard?"
- Michael Thompson, *It's A Boy*

"In what ways are we disapproving of boys' interests in our classrooms?"
- Joseph Tobin, Ph.D.

**School**
• The average boy is less mature than the average girl.
• Schools have changed, not boys.
• Early education is 80% language-based.
• Boys have trouble sitting still.
• Boys learn best by touching and moving.
• Most teachers are women, and they prefer girls' interests.

**Making it worse**
• Boys resist female authority.
• Active boys get in trouble.
• Fathers are rarely engaged.
• Media males are action figures, or doofuses.
What to do...
• Let them play.
• Enable boys to learn and solve problems physically.
• Let boys make their own reading and writing choices.
• Read aloud.
• Have a sense of humor about boys’ humor.
• Be clear and firm about limits, but never shame boys.
• Ask short, direct questions when problem-solving.
• Be encouraging.

Erikson’s Eight Psychosocial Stages

Maturity Ego Integrity vs. Despair → Wisdom
Middle Adulthood Generativity vs. Stagnation → Care
Young Adulthood Intimacy vs. Isolation → Love
Adolescence Identity vs. Confusion → Authenticity
Latency Industry vs. Inferiority → Competence
Locomotor Initiative vs. Guilt → Purpose
Muscular- Anal Autonomy vs. Shame → Will
Oral-Sensory Trust vs. Mistrust → Hope

The Montessori Male:
The Montessori outcome is an optimistic, intrinsically motivated boy who sets goals for himself with confidence that he has the ability and persistence to succeed; a young man with an inner life, who fully expresses his personality, his preferences, and his values.
